**MEMORANDUM REPORT ON**

Single Engine Pursuit - P-47B, AC No. 41-5942 PFB:da:19

Date January 28, 1943

SUBJECT: Comparative Propeller Tests.

SECTION Flight

Contract No. ....

SERIAL No. FS-M-19-1533-A

Expenditure Order No. 430-4-60

Purchase Order No. ....

**A. Purpose.**

1. To report results of flight tests of the P-47B airplane, AC No. 41-5942, conducted at the manufacturer's plant in order to obtain comparative performance with a 13 feet 0 inch diameter, No. 826, Curtiss test propeller and with the standard production propeller, No. 714-1C2-12; cuffs were not installed on either propeller. Airplane equipped with Pratt and Whitney R-2800-21 engine with torque meter and with an exhaust driven turbo supercharger. Gross weight at take-off for all tests was 12,620 pounds at 28.3 percent m.a.c., wheels up. Radio mast and antenna in place and eight .50 caliber machine guns installed. All tests with wheels and flaps up and with the mixture auto-rich.

**B. Test Results.**

1. High speeds at 2700 RPM and 2000 b.h.p. at 5000 feet, 25,000 feet, and critical altitude for 18,250 turbo RPM. Cowl flaps closed, intercooler and oil cooler flaps neutral.

| Altitude<br>Feet  | True Speed - MPH                           |   |
|-------------------|--|---|
|                   | Curtiss Prop. No. 826<br>13 ft. 0 in. Dia. | Curtiss Prop. No. 714-1C2-12<br>12 ft. 2 in. Dia. |
| 5,000             | 342  | 350   |
| 25,000            | 408  | 414   |
| Critical Altitude | 415 at 27,000 ft.                          | 421 at 27,300 ft.                                 |

2. Climb data obtained at 2700 RPM with throttle wide open and turbo on to give either 2000 torque b.h.p. or 18,250 turbo RPM. Cowl flaps, oil cooler, and intercooler flaps wide open.

| 20,000           | 218           | 2000             | 2440                                | 2240                                       |
| 23,300*          | 231           | 2000             | 2295                                | 2080                                       |
| 25,000           | 236           | 1900             | 2040                                | 1850                                       |
| 30,000           | 252           | 1620             | 1345                                | 1190                                       |
| 35,000           | 255           | 1350             | 700                                 | 550  |

\* Critical altitude for 2000 b.h.p. at 18,250 turbo RPM.  
Note: Above speeds are the same speeds as used for climbs in previous propeller tests on this airplane and are the minimum speeds at which the climbs can be made without overheating on a normal day.

Best climbing speed was 15 MPH slower and the rate of climb 20 feet per minute higher for the Curtiss 13 feet 0 inch diameter propeller No. 826. Best speed for the Curtiss No. 714-102-12 propeller was 5 MPH slower but there was no appreciable difference in rate of climb.

3. Distance required to take-off from a paved runway and clear a fifty foot obstacle with mixture auto-rich, cowl flaps, oil flaps, and intercooler flaps open.
